Grammar

Base Type

$\tau ::= \sigma \mid r$

$\sigma ::= \text{float} \mid \sigma \times \sigma \mid \eta \cdot \sigma$

Natural Numbers

$\eta ::= 0 \mid 1 \mid ...$

Range

$r ::= \eta..\eta \mid \text{empty}$

Term

$t ::= \text{fl} \mid \eta \mid p \mid \text{for } i : r \text{ in } t \mid \text{let } x := t \text{ in } t \mid (t, t) \mid \text{if } t \leq \eta \text{ then } t \text{ else } t \mid t + t \mid t * t \mid t - t \mid t/t$

- i and x are identifiers.

Literal

$\text{fl} ::= 0.0 \mid -4.21 \mid 523.215 \mid ...$

Place Expression

$p ::= x \mid p[t] \mid p.\text{fst} \mid p.\text{snd}$

Environment

Type Environment

$\Gamma ::= \bullet \mid \Gamma, (x : \tau)$

Typing Rules

$$\frac{\Gamma \vdash t_l : \text{float} \quad \Gamma \vdash t_r : \text{float} \quad \text{op} \in \{+, -, *, /\}}{\Gamma \vdash t_l \text{ op } t_r : \text{float}} \text{ T-ARITH}$$

$$\frac{x : \sigma \in \Gamma}{\Gamma \vdash x : \sigma} \text{ T-VAR}$$

$$\frac{\Gamma \vdash t : \sigma \quad \Gamma, (x : \sigma) \vdash t_{\text{body}} : \sigma_{\text{body}}}{\Gamma \vdash \text{let } x := t \text{ in } t_{\text{body}} : \sigma_{\text{body}}} \text{ T-LET}$$

$$\frac{r' = \mathrm{mkRng}(\eta_l..\eta_r) \quad \Gamma, (i : r') \vdash t_{\mathrm{body}} : \sigma}{\Gamma \vdash \mathrm{for}\ i : \eta_l..\eta_r\ \mathrm{in}\ t_{\mathrm{body}} : \mathrm{length}(r') \cdot \sigma}\ \text{T-FOR}$$

$$\frac{\Gamma \vdash t : \eta_t \cdot \sigma \quad \Gamma \vdash t_{\mathrm{index}} : \eta_l..\eta_r \quad \eta_r < \eta_t}{\Gamma \vdash t[t_{\mathrm{index}}] : \sigma}\ \text{T-INDEX-RANGE}$$

$$\frac{\Gamma \vdash t_{\mathrm{index}} : \mathrm{empty} \quad \Gamma \vdash t : \eta_t \cdot \sigma}{\Gamma \vdash t[t_{\mathrm{index}}] : \sigma}\ \text{T-INDEX-RANGE-EMPTY}$$

$$\frac{\Gamma \vdash t : \eta_t \cdot \sigma \quad \eta < \eta_t}{\Gamma \vdash t[\eta] : \sigma}\ \text{T-INDEX-NAT}$$

$$\frac{\Gamma \vdash t : \sigma_1 \times \sigma_2}{\Gamma \vdash t.\mathrm{fst} : \sigma_1}\ \text{T-FST}$$

$$\frac{\Gamma \vdash t : \sigma_1 \times \sigma_2}{\Gamma \vdash t.\mathrm{snd} : \sigma_2}\ \text{T-SND}$$

$$\frac{\Gamma \vdash t : \eta_l..\eta_r \quad r_{\mathrm{then}} = \mathrm{mkRng}(\eta_l.. \min(\eta, \eta_r)) \quad r_{\mathrm{else}} = \mathrm{mkRng}(\min(\eta, \eta_r) + 1..\eta_r) \quad \Gamma, (t : r_{\mathrm{then}}) \vdash t_{\mathrm{then}}\sigma_{\mathrm{then}} \quad \Gamma, (t : r_{\mathrm{else}}) \vdash t_{\mathrm{else}}\sigma_{\mathrm{else}} \quad \sigma = \sigma_{\mathrm{then}} = \sigma_{\mathrm{else}}}{\Gamma \vdash \mathrm{if}\ t \leq \eta\ \mathrm{then}\ t_{\mathrm{then}}\ \mathrm{else}\ t_{\mathrm{else}} : \sigma}\ \text{T-IF}$$
